

ELISHA WISDOM MIFATU

Backend-Focused Software Engineer

Kasoa, Ghana | Open to Remote | wisdommifatu12@gmail.com
elisha-mifatu.vercel.app | github.com/Ronny48 | linkedin.com/in/elisha-wisdom-mifatu

PROFESSIONAL SUMMARY

Backend-focused Full Stack Developer with hands-on experience designing, building, and deploying secure REST APIs and full-stack systems using Node.js, Express, and relational databases. Currently studying Computer Science at UCC while actively building production-grade applications deployed on Render and Vercel. Strong focus on API security, performance optimization, and clean, maintainable architecture. Seeking a backend engineering role to work on high-scale, security-conscious systems.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, Python, Java

Backend: Node.js (Express), FastAPI, Spring Boot, REST API Design, JWT Auth, Rate Limiting, Input Validation

Frontend: React, Tailwind CSS, HTML5, CSS3

Databases: PostgreSQL, MySQL, SQLite

Cloud & DevOps: Git, GitHub Actions, Vercel, Render, Docker

Architecture: MVC, API Security, Performance Optimization, Deployment

Testing: Jest

PROJECTS

Log Book — Visitor & Package Tracking System

React, Node.js, Express, SQLite | github.com/Ronny48/LogBook | <https://log-book-lime.vercel.app/>

- Replaced a paper-based manual logging process with a full-stack digital system, reducing check-in time and eliminating data entry errors for office staff.
- Designed and built RESTful APIs handling real-time status updates for visitor and package records, supporting concurrent operations without data loss.
- Architected a structured MVC backend with clear separation of concerns, making the codebase maintainable and ready for feature extension.
- Deployed to production on Render (backend) and Vercel (frontend), with the system actively used in a real office environment.

Production-Ready Blog Platform

Node.js, Express, MySQL | github.com/Ronny48/my-web-app | <https://blog-app-tdag.onrender.com/>

- Built a full-featured blog platform with secure content management, user authentication via JWT, and support for customizable themes.
- Designed an efficient MySQL schema with optimized queries to handle content retrieval at scale with low latency.
- Deployed to Render with production-ready configurations including environment-based config management and error handling middleware.

CERA — Campus Emergency Reporting App

Java, JavaFX (Scene Builder, FXML) | github.com/Ronny48/cera

-
- Developed a desktop emergency reporting system to improve campus safety response times, with anonymous reporting to protect user identity.
 - Designed a secure admin dashboard for incident management, enabling staff to view, prioritize, and respond to reports from a centralized interface.
 - Earned 2 GitHub stars from the community, demonstrating real-world interest in the tool.

PROFESSIONAL EXPERIENCE

IT Support Intern

Ministry of Energy and Green Transition — Ghana | Jan 2025 – Present

- Provided technical support to ~30–50 staff across a medium-scale office network, maintaining high system availability and resolving hardware, software, and network issues.
- Designed and deployed a digital visitor and letter tracking system (using React and Node.js) that replaced a manual paper-based process, streamlining office operations.
- Diagnosed and resolved recurring network infrastructure issues, improving overall system reliability and reducing downtime for end users.

EDUCATION

B.Sc. Computer Science — University of Cape Coast (UCC)

2022 – Present

Relevant Coursework: Data Structures & Algorithms, Computer Networking, Database Systems, Web Technologies

ADDITIONAL INFORMATION

- Strong focus on Backend Engineering, Cloud Computing, and System Design — consistently building projects that reach production deployment.
- Active GitHub contributor with 18 public repositories spanning backend APIs, full-stack apps, and desktop systems.
- Open to remote opportunities; experienced with async workflows and cloud-deployed environments.
